ABC Home Health, Inc.

Caring for you in your home for the last 35 years.

Services:

Assessment-You will meet with a nurse, who will have communicated with your doctor to determine your medical care needs. A treatment plan will be developed. The nurse will assign workers who will be working with you directly, to include a nurse, a nurse's aide, and a case manager. You will be referred to other services as needed.

Nurses Aides-These are likely to be the staff you will see most often. These are the staff who come in to take care of your meals, bathing, dressing, and other personal care needs. We will make our best effort to assign you to those who are the best fit for you and your individual needs.

Case Manager-This staff person is especially trained to assist with any community-based needs you may have. If you need assistance communicating with agencies, obtaining services, or solving problems with your benefits, a case manager would be helpful to you.

Counseling-A counselor can assist with any life adjustment or mental health needs.

Occupational Therapy-This is helpful if you have difficulty with everyday tasks such as losing your grip on a cup, not able to button your shirt, unable to open pill bottles due to arthritis and other conditions.

Physical Therapy-This service can help you to restore lost physical functioning due to a disabling illness or accident

Speech Therapy-This can be helpful after having experienced a stroke and other disabling conditions.

Housekeeping-Light housekeeping can be a big stress-buster.

24-hour access to staff

telemedical conferences with specialists' upon referral by doctor
